Automated Uniform Storage And Retrieval

The perfect solution to reduce floor space and manage employee's garments. Our Universal Automated Uniform Storage System the ASR-1000 is the most reliable in the industry. It has been tested and proven to work 24/7 for extended periods of time. The system combines a storage conveyor with a secure door. The process is very simple: Employees swipe their employee card through a card reader that recognizes their employee number and therefore their allocated slot on the conveyor. The conveyor then rotates to bring the employee's uniform bag to the door. Once the bag is at the door it unlocks and the employee can retrieve their work clothes. This solution is ideal for Hotels, Casinos and large Businesses. You can store uniforms from a few hundreds to tens of thousands of employees.

Benefits And Features

- Highly reliable and cost effective.
- Upgrade any existing systems like White's U-Pick-it or Metal Progetti.
- Huge real estate savings compare to locker systems
- Uniform management software helps you track clean and soiled uniforms
- Patent pending conveyor positioning system with 100% accuracy
- Multilingual interface - English, Spanish and French (others can be added).
